

# **VGH** VARIABLE GEOMETRY HEAD WITH TURNKNIFE® III

**A new generation  
of conical heads for your canter.**

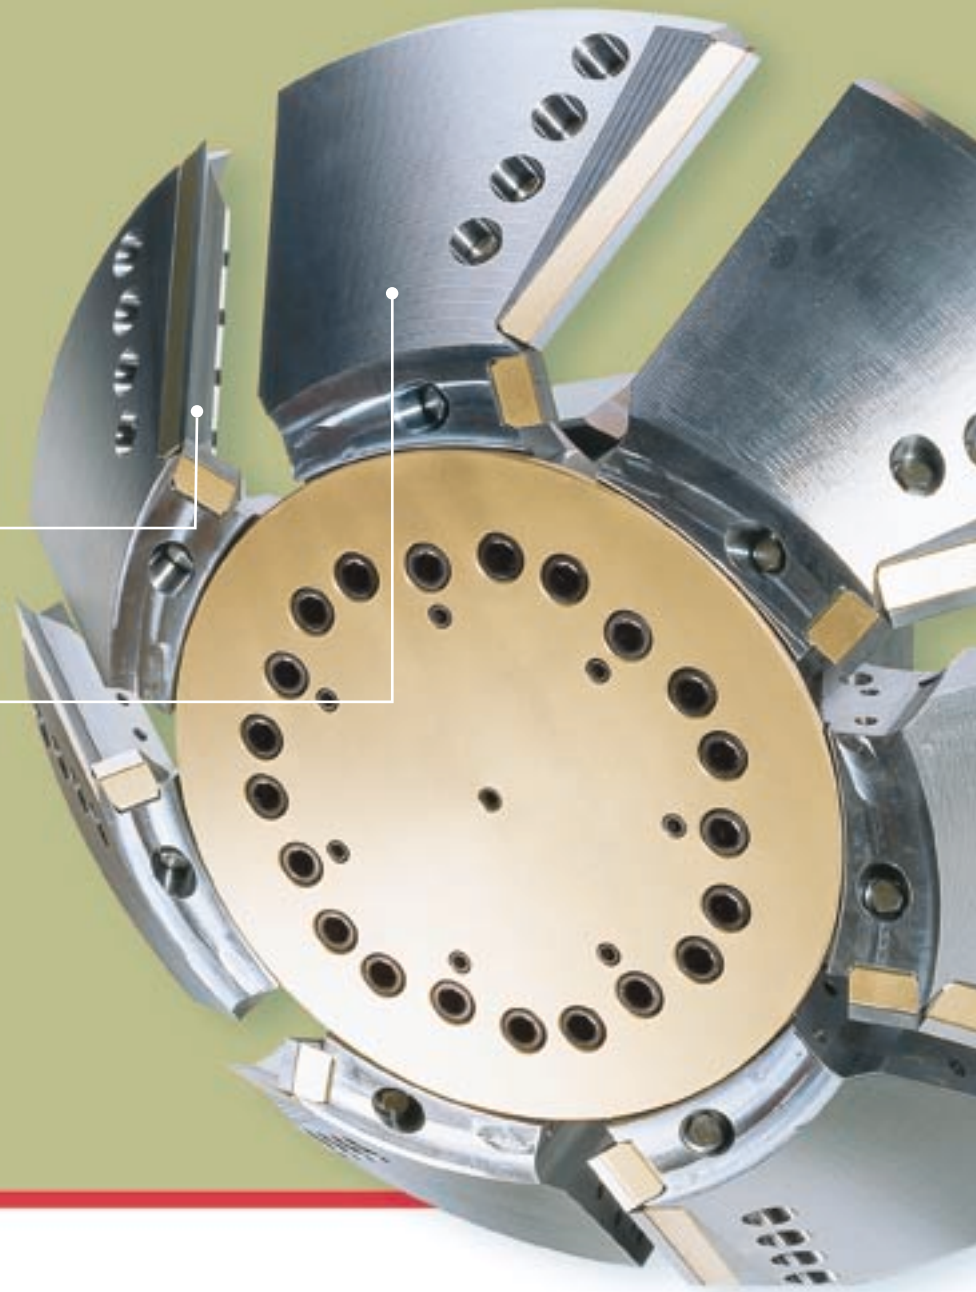

## **Features**

New generation TurnKnife III knife system optimized for canter heads. Underside clamping arrangement permits an unobstructed chip flow and interchangeable left and right parts (clamps, holders and knives).

Fully cammed outer surface provides for maximum surge limiting control and lateral stability.

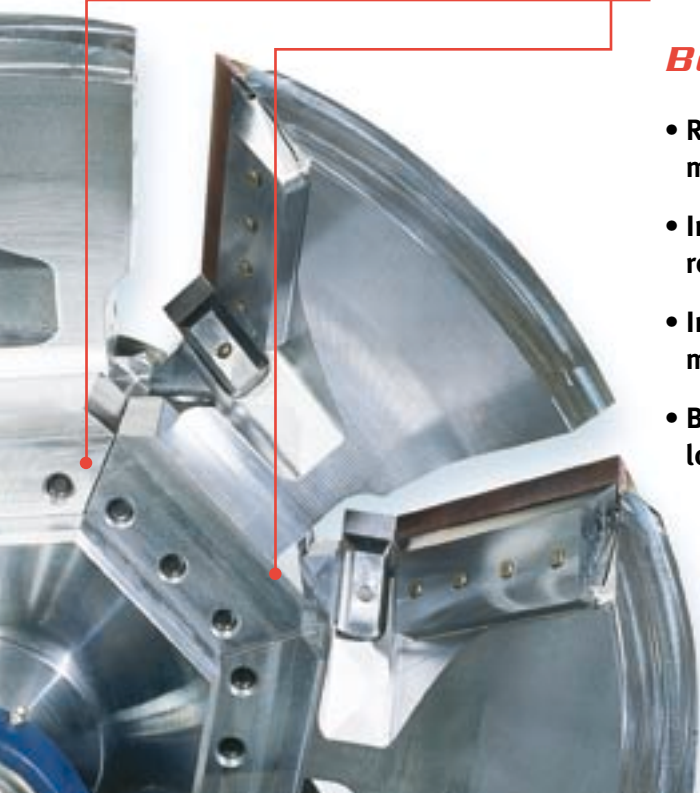

Modular head construction. Adapters are mounted using a unique clamping mechanism that allows for a quick and easy assembly.

Adjustable adapter position allows surge limiting surfaces and knife cutting angles to be optimized to the chip length being produced.

## **Benefits**

- **Reduced surging;  
more stable machine operation**
- **Increased lateral stability;  
reduced step cutting on entry.**
- **Improved chip quality;  
more uniform chips**
- **Better board finish;  
lower dimensional deviation**

# The PartnerChip® Concept

When economy and quality are what counts, Iggesund Tools is ready to back that commitment with a service that insures customers a fixed cost, improved quality, lower inventories and increased profits. Most of all it's your assurance of peace of mind.

*Here's how it works...*

# 1.

## **COST**

### **No Capital Investment**

Since the full service program means that we are responsible for maintaining an inventory of spare parts, you don't have to worry about this cost in your budget.

### **Known Fixed Cost**

The PartnerChip program means that we charge our customers a fixed monthly service fee. The cost involved is based on a detailed study to ensure that your company pays an equitable price for the services we provide.

# 2.

## **SERVICE**

### **Preventative Maintenance Service**

To assure the highest chip quality and the avoidance of any production disruptions, our service technicians or mechanical engineers will schedule up to four service visits. We will work with your maintenance personnel at your location and help you obtain the best results possible.

# 3.

## **PERFORMANCE**

### **Maintain Peak Performance of your Canter**

During our visits we will evaluate the quality of the finish of the lumber and chip samples will be taken. Using our ScanChip® analyser, we will provide a report on the quality of the chips being produced.
